The International

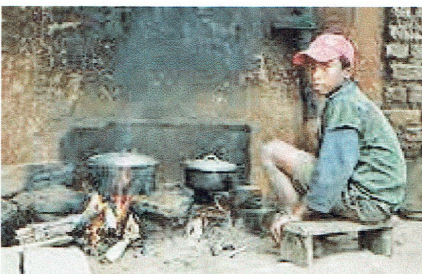

## A great international prize for Regulates Ochsner, by its solar activism and all the women of the world

▶ A woman worker

▶ Night love song and its people

▶ Cook with fire firewood of three stones, today million humans are making it

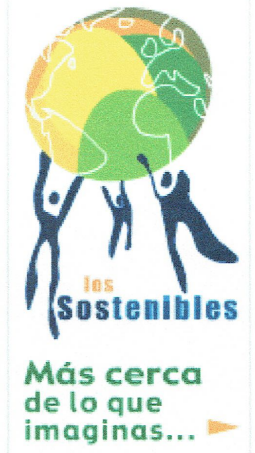

*8 of March of 2007.* Today it is a day where it is approximately celebrated the value and the recognition of 50% of the members of the human species. From the Foundation Earth we want to celebrate congratulating it and animating to all the companions of species to continue the battle by a right and ecological society, between all its members and by defect all the alive beings who accompany to us in this beautiful lost globe in the Universe. The sustainable and loaded decrease of love by the life we are convinced that it is the only question to which we must pay attention.

But we want to also celebrate doing it to us spokesmen of the news of the day that unites to us to have a direct relation with one of our battle areas, the solar food baking like aid to the fuel crisis in the favored towns less. We transferred the official notice of press here received today soon after being made the act in Paris. Immediately we have contacted with the organization promotional and acceded to resources of ong and awarded woman.

The recognition to a woman is a

- The durable and efficient solar furnace of the awarded project

pleasing one to please to celebrate the Day the International of the Woman presenting/displaying, who loves the renewable energies and that continue working so that the most flavorful and direct use of the solar energy is there of utility where more lack does and therefore it allows to give us account us to which we go at the moment exceeded of uses of the energy to grow in humility and respect towards the valuable power resources that we must preserve for which they will come.

Today Thursday, day 8 of March, agreeing with the celebration of the Day the International of the Woman, has occurred to know the name the winner of the Great Prize the International Trophy Land of Women 2007 granted by the [Foundation Yves Rocher-Institute of France](#).

One is the Swiss It regulates Ochsner and it has been by its project of solar energy for the food baking in Madagascar. In a ceremony that has taken place during the noon of today in the Palace of the Institute of France, minister of Ecology and Sustainable Desarrollo of France, Nelly Olin, has made delivery of the award, equipped with 10,000 €, destined to finance the new objectives of the initiated environmental project in Madagascar. Ochsner, today family and pair therapist, worked in Madagascar like cooperator between 1972 and 1975. It returned to the island in 1998 and verified that, after their game, whole forests had been victims of the deforestation. The inhabitants of the zone destroyed the trees and used their wood to cook foods.

From return to Switzerland, he started up a solar project of energy to implant it in Madagascar. While most of the wood was consumed to prepare the food, It regulates investigated an alternative solution that allowed the preparation of foods without burning the wood of the forests. It is as well as in the autumn of year 2000, a container loaded with 500 lots of pieces of construction for the installation of solar furnaces initiates the expedition towards Tuléar, to the south of Madagascar. Thanks to the collaboration of the president of a local environmental organization, Daniel Ramampihirika, this woman obtains the confidence of the inhabitants of the region. The project becomes reality, immediately is adopted by the population and it becomes a success.

The daily use of 500 solar furnaces avoids the cutting of 5,500 tons of wood. It regulates Ochsner is committed thus with the true sense of the sustainable development. It is with this spirit with whom it creates the [Association for the Development of the Solar Energy \(YOU ACCEPT\)](#), recognized like a ONG and presided over by her.

In 2004 Ochsner it opens in Madagascar the first factory that serves as model in the use of renewable energies. There the solar facilities and furnaces make, besides to explain the different uses from the renewable energies. In 2006 Ochsner it opens the second factory of Madagascar.

*Next stages:*

- The use of the solar facilities must intensify and extend to great surfaces of Madagascar

(for example hospitable centers and hotels).

- A work of spreading of the carried out project by means of demonstrations of kitchen, cooperation with organizations of women and also through the information in the schools so that they integrate the idea of the solar energy in his educative programs. In next the 8 or 10 years YOU ACCEPT projects to construct it several regional and local centers.

- The cooperation with the Tenema company Is predicted. This corporation has started up a generator set that uses solar energy basically and is able to give provision to all a city.

*The objectives:*

Thanks to the collaboration of the government, all south of Madagascar could be supplied by solar furnaces through four regional centers (until now, only there are two solar centers).

These solar facilities would allow:

- Provision of in the south of the island through water pumps that work with solar energy.

- Electrification of the small towns that makes possible the use of household-electric, mainly the radio with the purpose of informing and fighting against the AIDS.

- Informative Films in the cinemas and advertising campaign of great spread.

**The Trophy Land of Women:**

**In this edition, eleven countries have participated in the Great Prize the International, among them Spain. In the today ceremony the call of the next edition 2007/2008 has appeared that will be fourth in our country.**
